Spanning eastern Indonesia, parts of Malaysia, the Philippines, Papua New Guinea, East Timor and the Solomon Islands, the Coral Triangle is the world's epicenter of marine diversity, with more coral and reef fish species than anywhere else in the world. In response to unsustainable fishing practices, development and degradation of reef ecosystems due to global warming, the Conservancy and our partners are working to transform marine conservation in the Coral Triangle by establishing large-scale networks of marine protected areas that can survive global change and human threats.

Sincerely,
Patrick J. Bergman
The Coral Triangle
Trish Lawyer

Dear Better Courts for Missouri,
You guys are a joke. I'm not surprised that
no one in your "organization" has the guts to
sign the track you send out in the mail.
"Reform" of Missouri's judicial system? It
"Reform" what your "reform" looks like -
political hacks put up by ultra conservative
"reform" groups funded by business and insurance
companies. Go to Miller and read John
Gerrish's "The Appeal on your way." (over)
